

PerforMax[™]

Maximize the value of every cell site

[Learn more →](#)

The next-generation antenna family that help mobile network operators increase capacity, extend coverage and improve network performance from existing cell sites.

Optimized around real-world network performance, not just antenna specifications.

- Advanced network simulation modeling
- 3D pattern optimization
- Network-level design analytics

MORE CAPACITY

↑ +20%

Network capacity increase

↑ +1.2 dB

SINR Improvement

Improved throughput &
spectral efficiency

Better user experience

EXPANDED COVERAGE

↑ +20%

Coverage extension

Better coverage control

Improved interference
management

Better network performance

MORE SITE VALUE

↓ +20%

Lower weight

↓ +5%

Wind load reduction

PIM as low as -153 dBc

Delay costly network upgrades
and improve long-term
infrastructure economics

A new way to **design antennas**.
A smarter way to **improve network performance**.
