#### Base Product

1.2 m | 4 ft ValuLine® High Performance Low Profile Antenna, dualpolarized, 5.925–7.125 GHz

### Product Classification

| Product Type                                     | Microwave antenna  |
|--|--|
| Product Brand                                    | ValuLine®  |
| General Specifications                           |  |
| Antenna Type                                     | VHLPX - ValuLine® High Performance Low Profile Antenna, dual-<br>polarized |
| Polarization                                     | Dual   |
| Side Struts, Included                            | 1 inboard  |
| Side Struts, Optional                            | 1 inboard  |
| Dimensions                                       |  |
| Diameter, nominal                                | 1.2 m   4 ft   |
| Electrical Specifications                        |  |
| Operating Frequency Band                         | 5.925 – 7.125 GHz  |
| Gain, Low Band                                   | 34.5 dBi   |
| Gain, Mid Band                                   | 35.5 dBi   |
| Gain, Top Band                                   | 36.5 dBi   |
| Boresite Cross Polarization Discrimination (XPD) | 30 dB  |
| Front-to-Back Ratio                              | 62 dB  |
| Beamwidth, Horizontal                            | 2.9 °  |
| Beamwidth, Vertical                              | 2.9 °  |
| Return Loss                                      | 17.7 dB  |
| VSWR   | 1.3  |
| Radiation Pattern Envelope Reference (RPE)       | 7137C  |
| Electrical Compliance                            | Brazil Anatel Class 2   ETSI 302 217 Class 3   US FCC Part<br>101B2        |

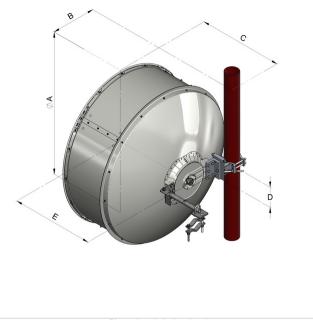

### Electrical Specifications, Band 2

| Operating Frequency Band          | 5.700 – 5.875 GHz      |
|-----------------------------------|------------------------|
| Gain, Mid Band                    | 34.3 dBi               |
| Beamwidth, Horizontal             | 3.1 °                  |
| Beamwidth, Vertical               | 3.1 °                  |
| Mechanical Specifications         |                        |
| Compatible Mounting Pipe Diameter | 115 mm   4.5 in        |
| Fine Azimuth Adjustment Range     | ±15°                   |
| Fine Elevation Adjustment Range   | ±15°                   |
| Wind Speed, operational           | 201 km/h   124.896 mph |
| Wind Speed, survival              | 250 km/h   155.343 mph |

### Antenna Dimensions and Mounting Information

|                      | Dim         | ensions in in | ches (mm)  |           |            |
|----------------------|-------------|---------------|------------|-----------|------------|
| Antenna size, ft (m) | A           | В             | С          | D         | E          |
| 4 (1.2)              | 50.8 (1291) | 16 (407)      | 30.2 (767) | 7.2 (183) | 29.5 (748) |

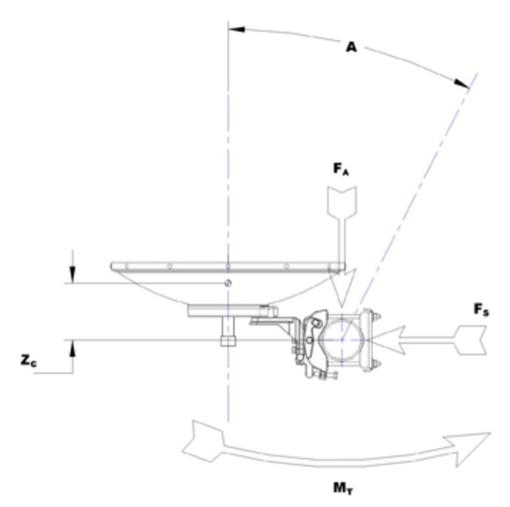

### Wind Forces at Wind Velocity Survival Rating

| Axial Force (FA)                      | 5326 N   1,197.333 lbf      |
|---------------------------------------|-----------------------------|
| Side Force (FS)                       | 2638 N   593.046 lbf        |
| Twisting Moment (MT)                  | 2162 N-m   19,135.312 in lb |
| Force on Inboard Strut Side           | 2862 N   643.403 lbf        |
| Zcg without Ice                       | 43 mm   1.693 in            |
| Zcg with 1/2 in (12 mm) Radial Ice    | 284 mm   11.181 in          |
| Weight with 1/2 in (12 mm) Radial Ice | 74 kg   163.142 lb          |

### Packaging and Weights

Weight, net

Agency

32 kg | 70.548 lb

### Regulatory Compliance/Certifications

#### Classification

ISO 9001:2015

Designed, manufactured and/or distributed under this quality management system

### \* Footnotes

#### **Operating Frequency Band**

Bands correspond with CCIR recommendations or common allocations used throughout the world. Other ranges can be accommodated on special order.

Page 4 of 5

| Gain, Mid Band                                   | For a given frequency band, gain is primarily a function of antenna size.<br>The gain of Andrew antennas is determined by either gain by comparison<br>or by computer integration of the measured antenna patterns.  |
|--|--|
| Boresite Cross Polarization Discrimination (XPD) | The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.   |
| Front-to-Back Ratio                              | Denotes highest radiation relative to the main beam, at 180° ±40°, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.  |
| Return Loss                                      | The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.   |
| VSWR   | Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.   |
| Radiation Pattern Envelope Reference (RPE)       | Radiation patterns define an antenna's ability to discriminate against<br>unwanted signals. Under still dry conditions, production antennas will not<br>have any peak exceeding the current RPE by more than 3dB, maintaining<br>an angular accuracy of +/-1° throughout |
| Wind Speed, operational                          | For VHLP(X), SHP(X), HX and USX antennas, the wind speed where the maximum antenna deflection is 0.3 x the 3 dB beam width of the antenna. For other antennas, it is defined as a deflection is equal to or less than 0.1 degrees.                                       |
| Wind Speed, survival                             | The maximum wind speed the antenna, including mounts and radomes,<br>where applicable, will withstand without permanent deformation.<br>Realignment may be required. This wind speed is applicable to antenna<br>with the specified amount of radial ice.                |
| Axial Force (FA)                                 | Maximum forces exerted on a supporting structure as a result of wind<br>from the most critical direction for this parameter. The individual<br>maximums specified may not occur simultaneously. All forces are<br>referenced to the mounting pipe.                       |
| Side Force (FS)                                  | Maximum side force exerted on the mounting pipe as a result of wind from<br>the most critical direction for this parameter. The individual maximums<br>specified may not occur simultaneously. All forces are referenced to the<br>mounting pipe.                        |
| Twisting Moment (MT)                             | Maximum forces exerted on a supporting structure as a result of wind<br>from the most critical direction for this parameter. The individual<br>maximums specified may not occur simultaneously. All forces are<br>referenced to the mounting pipe.                       |
